Notes

Analytics set up changed from October 2025 showing a huge number of bot accounts primarily from China but also Singapore, Dubai and others. I have not included them in the list of user locations but it is no longer possible to get an accurate percentage of users from each area as the data is so skewed. The influx of bot accounts also affects the page views which is why there is a sudden increase. Seems to settle from March 2026 (China bots disappear but Singapore remain)
